Objective

-
- I am a dedicated and results-driven Computer Science student at Helwan University, specializing in the MERN stack (MongoDB, Express.js, React, Node.js). Experienced in building full-stack web applications using React, Next.js, TypeScript, Node.js, Express, and MongoDB. Passionate about developing scalable, performant, and user-centric web solutions with modern JavaScript technologies. Continuously expanding skills in backend architecture, APIs, and full-stack best practices. Seeking opportunities to contribute to innovative software projects and grow within a dynamic development team.

Education

Computer Science Helwan University

2023-2027

Bachelor's degree in computer science and Artificial Intelligence, Expected Graduation: 2027.

Magor: IS

Jun 2025

- Currently enrolled in DEPI Internship at YAT Learning Solutions Company, specializing in React Track as part of the MERN Stack Development.

Projects

Job Portal Website – Full-Stack MERN Development Project

Developed a scalable and role-based job portal web application using **MongoDB, Express.js, React, and Node.js**.

- Designed and implemented a multi-role system (**Employer, Job Seeker, Admin**) with secure authentication and authorization using JWT and role-based access control.
 - Built a complete job management flow allowing employers to create, edit, close, and manage job postings, while job seekers can browse, save, and apply for jobs.
 - Implemented an application tracking system where employers can review candidates, update application statuses, and job seekers can monitor their application progress.
 - Developed user profile management features including resume upload, profile picture updates, and company logo management with secure file handling.
 - Integrated notification and OTP verification systems to enhance user engagement and application security.
 - Focused on performance, scalability, and clean RESTful API architecture to support real-world production use cases.

Real-Time Chat Application – MERN Stack Project

Developed a full-featured real-time chat application using MongoDB, Express.js, React, Node.js, and Socket.io, focusing on performance, scalability, and a smooth user experience.

- Built a secure authentication system with Login and Signup, using JWT and password hashing to protect user data.
- Implemented real-time messaging with Socket.io, supporting instant text and image messages without page reloads.
- Added online/offline user status and typing indicators to enhance real-time communication and usability.

- Designed a modern and responsive user interface using Tailwind CSS and Material UI, with smooth animations via Framer Motion.
- Developed global state management using Context API and Zustand for cleaner architecture and better scalability.
- Integrated Cloudinary for efficient image uploads and optimized media handling.
- Implemented user profile management features, including profile updates and theme switching (Dark / Light mode).
- Used Skeleton loaders and placeholders to improve perceived performance while fetching data from the API.
- Tested and validated all RESTful APIs using Postman before frontend integration to ensure reliability and correctness.

E-Commerce Skincare Application – MERN Stack Project

Developed a full-stack e-commerce skincare application using MongoDB, Express.js, React, and Node.js, focusing on scalability, performance, and a seamless shopping experience.

- Built a secure authentication system with Login, Signup, and Signout using JWT-based authentication.
- Developed responsive and user-friendly pages including Home, About, Blog, Store, Shop, and Contact.
- Implemented core e-commerce features such as product search, wishlist, shopping cart, and checkout flow.
- Integrated RESTful APIs using Axios for efficient communication between frontend and backend services.
- Applied state management using Redux Toolkit, Context API, and React hooks for predictable and scalable data flow.
- Designed a modern and responsive UI using Material UI and Bootstrap, enhanced with smooth animations via Framer Motion.
- Added interactive components such as product sliders, notifications, and dynamic content updates to improve usability.
- Implemented notification handling using Notistack for better user feedback and experience.
- Integrated Google Maps API to enhance location-based features within the application.
- Followed best practices in structuring and deploying full MERN stack applications.

Weather Application – React Project

Developed a modern and responsive weather application using React, focusing on usability, clean architecture, and real-time data handling.

- Built the application using React Hooks, including useState, useEffect, useContext, and custom hooks to manage state and side effects in a reusable and maintainable way.
- Implemented multi-page navigation using React Router, enabling smooth transitions between pages such as Home, Forecast, and Settings.
- Integrated local storage to persist user preferences, including temperature units (Celsius/Fahrenheit) and selected locations across browser sessions.
- Added interactive map integration to allow users to select any global location and retrieve real-time weather data.
- Designed a fully responsive and modern user interface using Material UI, including dark mode support, cards, grid layouts, and toggle controls.
- Implemented city-based search and automatic location detection to display accurate weather information.
- Displayed detailed weather data such as temperature, pressure, wind speed, humidity, and forecast

information.

- Integrated a real-time weather API and handled loading states and errors gracefully with clear user feedback messages.
- Focused on responsive design and user experience to ensure consistent performance across different screen sizes and devices.

Skills

- **Front-end development:** HTML, CSS, JavaScript, Bootstrap, React
- **Programming & Concepts:** C, C++, Java, PHP, OOP, Data Structures, Algorithms, Database management, SQL , MySQL - Development **Tools:** Git, GitHub, Visual Studio Code - **Web Design & Performance:** Responsive Design.
